You don't need to purchase a copy of Photoshop to use it. It is available free and as a trial for many operating systems. If you like what you see, buy a copy and you can experiment with the tool and show off your images, even take them to the next level with special effects. Photoshop is not the only image-editing software available. Software programs from other companies exist, and you should consider using one of them. I recommend GIMP, Adobe Fireworks, and Corel Photo-Paint as companies you can use. Both GIMP and Fireworks support layer-based editing, and GIMP has many of Photoshop's functions as well. You can learn more about them in the next two sections. The next section introduces Corel Photo-Paint, a program that is mainly used for working in a raster format. Playing with layers in GIMP In addition to Photoshop, GIMP (GNU Image Manipulation Program) is probably the most popular image-editing software available. You can get it through the software repositories on your operating system — Windows 7 users can choose to download it from Microsoft's website at 'www.microsoft.com/windows/products/windows-7/downloads.aspx' and 'www.microsoft.com/windows/products/windows-server-2008/windows-2008-downloads.aspx' for Windows Server 2008. Other operating systems, including Mac, have similar sites. (I'm not aware of any other image-editing software as popular as GIMP.) GIMP is very different from Photoshop in both its functions and the way it looks. It is similar to the well-known Paint Shop Pro (PSP) of the 1990s, and many features are the same. However, when you open your photograph in GIMP, you don't see the familiar hard-edged picture. Instead, when you open a photo in GIMP, you see a whole new image, with a white screen (see Figure 9-1). In this new window, you have access to the most frequently used functions — such as painting or cleaning up images and adding and changing color — that you can use with other types of images too. **Figure 9-1:** GIMP is the most popular free tool for editing raster images. GIMP has many more effects and tools than Photoshop, so you can create

Q: How to reduce output from docker-compose run? I have a docker-compose.yml which contains two containers. I am running this compose from a docker-compose run. The docker-compose output is a bit big so I was wondering is there any way I can edit it to get only what I want. Thanks A: docker-compose --no-ansi --quiet might help to hide the whole output. But in general you might use as many docker logs to see what is going on. Immunohistochemical localization of vasoactive intestinal polypeptide-immunoreactive nerve fibres and their relationship to secretin-immunoreactive nerve elements in the rat. The possibility that vasoactive intestinal polypeptide (VIP) may be an inhibitory modulator of peptidergic secretin (secretin) cells in the rat has been suggested previously, but direct evidence is not available. It was found by immunohistochemical methods that considerable numbers of perikarya and nerve fibres of the proposed VIP and secretin cell systems are, in fact, closely and intimately associated. In the present study, it was shown that both VIP-immunoreactive (VIP-I) perikarya and VIP-I nerve fibres are distributed in a symmetrical pattern around the musculature of the distal ileum, and closely and intimately associated with secretin-immunoreactive (secretin-I) elements of the myenteric plexus. This association was found to exist in both the ileum and in the proximal colon of the rat. Only occasional VIP-I nerve fibres were seen in other locations throughout the intestinal tract. VIP-I perikarya were most numerous in the myenteric plexus in the proximal and distal colon. The presence of VIP in the enteric plexus suggests a function within the enteric nervous system that has not been described previously. Campaigners are trying to convince Brussels to ban mass snap closures of public transport networks in the EU, warning they would lead to "limbo" patterns of usage and a deterioration of the environment. Anne Singer, policy co-ordinator at Passenger Focus, said: "There is a lot of worry about the prospect of mass TFL closures in the next few years

Engines may use a turbocharger system to increase engine torque and power density. The turbocharger system may include a wastegate valve coupled to a wastegate used to control a flow of exhaust gas recirculated back into the exhaust system of the engine. The wastegate valve may be controlled via a solenoid-controlled valve. Positioning of the solenoid-controlled valve may be based on engine data. As one example, positioning of the wastegate valve may be based on engine speed and load. However, engine sensors for controlling wastegate valve position may not always be available or may produce unreliable data. For example, the wastegate may have been fixed at a wastegate open position by a previous service repair. In one example, the issues described above may be addressed by a method for controlling a wastegate positioning valve position, comprising: opening a wastegate valve in response to a first condition and in response to a second condition at the wastegate valve, wherein opening the wastegate valve is a first function of an engine speed and a first engine load condition, and wherein opening the wastegate valve is a second function of a second engine load condition, and wherein opening the wastegate valve is performed while decelerating a vehicle, and wherein opening the wastegate valve is performed at the wastegate valve when engine speed is greater than a threshold engine speed and the second condition is met. In this way, when conditions that warrant wastegate valve opening are met, the wastegate valve may be opened and wastegate function may be restored so the wastegate valve may be at a wastegate open position. During this time, a wastegate sensor may not be able to accurately determine wastegate position or based on sensor data, may not be able to accurately determine wastegate position. However, the wastegate valve may be automatically opened in a reliable manner. Thus, a robust wastegate valve opening function may be provided. It should be understood that the summary above is provided to introduce in simplified form a selection of concepts that are further described in the detailed description.
