Solution. "Committee on the future of the hydrogen economy: The role of.. Clean Air Act and the private sector. 5.. "Issues in the role of energy efficiency in the future.Seton Hall University's men's basketball program took yet another hit Tuesday with the news that sophomore guard DaJuan Coleman will miss the remainder of the season, as first reported by The Star-Ledger. The injury occurred during a preseason workout in Philadelphia on Saturday. Coleman was to undergo surgery and will likely have a second operation to repair the dislocated patella tendon in his left knee, according to a person close to Coleman who asked to remain anonymous. A five-star prospect from Chicago, Coleman struggled to regain the confidence after a double-knee surgery in 2014. He spent most of last season playing as the fifth man off the bench, but after the surgery he said he would be a "different player." Coleman's absence will be felt in Big East play this

season. The Pirates play Georgetown, Villanova and Seton Hall in the Big East, meaning they will have to replace their best perimeter defender and scorer. Corey Janecek, a freshman who was Coleman's teammate last year at Notre Dame, is expected to fill in as the starting point guard. Senior Dominic Cheek has also been playing point guard and had been considered a solid backup to Janecek, but with Coleman's injury there could be some minutes opening up for him. The same person who spoke to The Star-Ledger said Coleman had been working to regain the confidence in his surgically repaired knee after the surgery in 2014. The Pirates (2-3) will host Texas Tech at the Prudential Center in Newark on Wednesday before playing its home games. Their Big East season opener is set for Saturday when they travel to play the Hoyas in Philadelphia.Q: How to save the image in my api project locally using the image path of the folder on the desktop in.net Core I'm creating an api with.net core, here I'm trying to upload an image on the local folder. When I try to use the image path I get the error: The provided path does not refer to a file in the project.The image path must refer to a file in the project. I checked all the questions here and it seems the image path should be an absolute path. I tried to save the
